The alternative to solvent parts cleaners

PARTZ-WASH is a parts cleaning system which uses bioremediation technology to dramatically reduce waste fluid generation, cutting the expense of hazardous waste removal and bringing savings to the user.

Cost effective, safe to use, durable and most importantly a parts washer that works

PARTZ-WASH is the latest innovation in eco-friendly parts washing. A solvent-free, safe alternative to harsh cleaning chemicals; it makes cleaning parts a quicker, safer, more pleasant experience. This clever parts washer uses bioremediation to effectively self-recycle its own cleaning solution - we're just taking what mother nature does naturally and speeding it up. Biological parts washers are now a well-proven technology, cleaning millions of parts on a daily basis across the world. It's the smarter way to clean.

- Solvent-free, no vapours
- Non-flammable, non toxic aqueous-based degreasing fluid
- Heated to 42°C so more pleasant to use
- No monthly service contracts
- Reduced waste disposal costs
- Lowers risk to employees and the environment
- Simplified CoSHH reporting
- Assists in ISO14001 compliance

Bioremediation - How it Works

The PARTZ-WASH system comprises of three distinct parts: The PARTZ-WASH Machine, the PARTZ-WASH Degreasing Solution and the PARTZ-WASH Microbial Filter Mat.

- The Microbial Filter Mat contains millions of naturally occurring micro-organisms
- It releases these micro-organisms into the ROWasher system
- The micro-organisms break down, or "eat", the oil and grease washed off dirty parts in the heated PARTZ-WASH Degreasing Solution
- The micro-organisms turn it all into harmless carbon dioxide and water
- This process leaves the PARTZ-WASH Degreasing Solution clean and strong for every use
- Effectively recycling the fluid and reducing the need for hazardous waste disposal

Easy Maintenance

PARTZ-WASH eliminates the requirement of a costly waste removal service contract and can be easily maintained in-house with a monthly filter change and regular top up of fluid.

Choose the PARTZ-WASH to Suit the Way You Work

All models feature user-friendly, LED diagnostic controls, double-skinned insulated tank and Eco-Mode for energy savings, flo-thru brush and a super capacity pump, pumping 15 litres per minute. A flexible nozzle gives a powerful adjustable flow rate whilst a filter basket set into the sink tray traps larger particles of debris.

1. Choose the PARTZ-WASH machine to suit the way you work

Static

Mobile

XL

2. Choose the PARTZ-WASH Degreasing Solution for the material you are cleaning

**PARTZ-WASH
General**

**PARTZ-WASH
Specialist Metals**

The degreasing fluid is pH-neutral, biodegradable, non-toxic, non-caustic and non-hazardous. It contains no known carcinogens and has no flash point.

3. Choose the PARTZ-WASH Microbial Filter Mat to meet your cleaning demands

Single Layer

Multi-Layer

The Filter Mat is the key component in the PARTZ-WASH system. It is designed to introduce the microbes into the system and to help reduce excess clogging. It must be changed monthly in order to keep the microbe colony healthy and maintain the PARTZ-WASH working at peak performance. The Multi-Layer Filter Mat has four 50 micron layers to deal with heavy use cleaning applications – one to be peeled away each week.

Key Benefits

- Best in bioremediation
- Non hazardous solution
- VOC free
- Heated to 42°C for comfort and speed
- No need for expensive service contracts
- Assists compliance with ISO14001
